

LED Cordless Cap Lamps and head torches.

The KL lamp range from Jiebo Technology has been developed in conjunction with Protector Lamp one of the oldest names in mine safety lighting.

The lamps are now widely in use in UK surface mines and for coal preparation.

They are ideal for any situation where hands free lighting is becoming the accepted norm under EU Health and Safety Legislation.

The range will shortly receive Atex M1 certification for use in explosive atmospheres.

This will cover the vast majority of industrial user requirements such as refineries, sewer relining, firefighters, search and rescue and any confined space working.

	KL2LM(A)	KL2LM(HL)
Work time high beam	>18 hours	>12 hours
